ACADEMIC HEALTH CENTER

The Reverend Dr. David CM Taylor
Emeritus Professor of Medical Education
Gulf Medical University

Dr Alireza Amin

I know Dr Alireza well and have worked alongside him for more than 5 years. He is a totally reliable colleague, who engenders enthusiasm for education in both Faculty and students. You will have seen his CV and portfolio, and I can confirm their accuracy. Inspection of his portfolio of activity will encourage you to consider his IT skills – which are excellent.

In recent years Dr Alireza has been completing his master's degree in Health Professions Education, with a view to graduating in November 2026.

He has been supervised over the past years by me, and most recently Prof Henk Schmidt, and he has a very clear understanding of health professions education, and a facility for research involving students. In terms of IT he is technically very competent, and he is a real asset in the simulation laboratory. Dr Alireza is a very good teacher and is popular with the students. He is engaging and exciting to watch - even for those of us who have seen it all before. He is a very safe pair of hands as an educator. His clinical knowledge is good, and he is a graduate of our university. Even as a student he was well known to Faculty, and he is a trusted colleague.

Dr Alireza is very motivated to follow a career in health professions education and can work autonomously. He values other people's opinions and has never appeared resistant to sensible suggestions!

In the light of this application, I think it is important to know that he writes very well and thinks very clearly. He is quick to take on new ideas but is well prepared to question and work the logic through. His work has been of a high standard across all the domains of our HPE program, and he is familiar with and can use AI effectively. He has, of course, obtained his NIDA Clinical Trials Network "Good Clinical Practice" award.

I give Dr Alireza Amin my full support, and a would be most happy to answer any specific questions you might have.

Yours sincerely 

David Taylor, PhD, EdD, FRSB PFHEA FAMEE FAcadMEd
